

Cloud Foundations

“How do we build our cloud properly?”

Target architecture, governance, identity, networking, monitoring and cost controls.

DESIGNED FOR

Organizations launching cloud workloads or standardizing a fragmented cloud environment.

WHAT WE DO

- Define cloud structure, workload requirements and governance principles.
- Design identity, networking, policy and deployment standards.
- Establish monitoring, cost allocation and operational handover.

WHAT YOU RECEIVE

- Target architecture and documented design decisions.
- Agreed cloud foundations configured with reusable standards.
- Monitoring and cost baseline, runbooks and handover.

THE BUSINESS OUTCOME

A governed cloud environment prepared for consistent workload deployment and operation.

HOW WE ENGAGE

Confirm platforms, environments and responsibilities; validate connectivity, access and operational acceptance.

Track policy coverage, deployment consistency, cost allocation and operational readiness.

ENGAGEMENT MODEL

Project

[Register interest >](#)

Scope, fees, schedule and third-party costs are agreed in the proposal.
